SUMMARY

Computer Science undergraduate at Umm Al-Qura University (GPA: 3.55/4.00) with hands-on technical experience in Data Analysis, SQL, Excel, Python (Pandas), and Power BI. Core competencies include database design, data cleaning, exploratory data analysis (EDA), KPI extraction, data visualization, and dashboard development. Seeking a Data Analytics internship to apply analytical skills to real-world datasets and drive business insights.

EDUCATION

Umm Al-Qura University, *B.Sc. in Computer Science*

Database Systems, Data Structures & Algorithms, Statistics & Probability, Artificial Intelligence, Object-Oriented Programming (Java), Software Engineering.

SKILLS

Data Analysis & Visualization — Data Cleaning, Data Visualization, Exploratory Data Analysis (EDA), KPI Analysis, Dashboard Development, Power BI, Excel, Power BI Copilot.

Programming & Version Control — Python (Pandas), SQL, Git, GitHub.

Database Management — MySQL, Schema Design, Normalization, Complex Joins, Subqueries, Views, Stored Procedures, Indexing.

PROJECTS

EyeCare Relational Database & Data Analysis Project 🔗

- Designed and normalized a relational database with 4 tables, utilizing primary and foreign keys to enforce data integrity.
- Wrote multi-table JOIN scripts to extract historical transaction records and translate raw relational data into actionable business reports.
- Applied SQL aggregate functions (GROUP BY, SUM, COUNT) to calculate key performance indicators regarding customer purchasing patterns.
- Implemented nested AVG() subqueries to isolate high-value transactions and created reusable SQL VIEWS for seamless dashboard integration.

Excellence Academy Database System 🔗

- Engineered a 6-table relational database system to manage complex relationships across students, faculty, and academic courses.
- Applied 8+ constraints including CHECK, UNIQUE, FOREIGN KEY, and NOT NULL to maintain data hygiene and prevent invalid records.
- Developed custom stored procedures to simplify recurring database operations, implementing indexing strategies to optimize query performance.

SafeStep Women's Safety Mobile Application 🔗

- Authored functional requirements per IEEE 830 standards and designed UML Use Case and Class diagrams.
- Managed software development lifecycle phases, established testing protocols, and documented bug tracking reports within a team of 4.

CERTIFICATES

Data Analytics Bootcamp — (30 Hours) — Hash Plus

Excel & Power BI — (Beginner-Advanced) — Hash Plus

SQL — 101, 102, 103 — Satr Platform

Python — 101, 102, 103, 104 — Satr Platform

Data Science & AI Unit — (75 Hours) — Mawhiba Academic Enrichment Program, Umm Al-Qura University
